Euroenergy Biogas West SA
(Greece)

ISABEL will unfold simultaneously in three regions across Europe, located in the United Kingdom, Germany, and Greece. There, ISABEL will attempt to set up and grow local biogas communities and provide them with the necessary tools and support to develop and manage their local biogas production and consumption.

This brochure contains graphics designed by **Freepik**

ISABEL is funded by the European Commission under the HORIZON 2020 Programme for Research and Innovation (Grant Agreement No 691752)

Triggering Sustainable Biogas Communities Through Social Innovation

Project duration:
Jan 2016 - Dec 2018

Local community

ISABEL is focused on local and small-scale production and consumption of biogas. We operate under the assumption that local biogas supply chains are best organised when all stakeholders, including citizens, are involved in the governance and decision-making processes.

To realise this vision, ISABEL launches local interventions with the aim to create new and support existing communities of biogas supporters in co-developing and testing different cooperative models, tailored to local conditions, needs, and expectations.

emPOWERment

ISABEL strives to empower communities to realise their local vision by providing them with:

- **Expert advice and information** on all aspects of AD Biogas and community energy
- A **digital collaborative platform** and specialised tools for planning and development
- **Hands-on collaboration and innovation** workshops and events (36 events in total)
- Targeted **awareness campaign** and **online presence** (reaching >3000 stakeholders)
- **Access to policy-makers** and authorities
- A **platform to share knowledge and resources** with similar initiatives across Europe

Sustainable Biogas

ISABEL promotes Biogas produced through **Anaerobic Digestion (AD) of organic waste**. This process is considered to be fully sustainable as it has the following advantages:

1. It can function on **100% organic waste** without requiring energy crops
2. It is a **zero-sum GHG emissions** process
3. It produces **usable by-products**
4. It is suitable for **small-scale production**
5. It is **synergistic with other renewables** (e.g. solar and wind)
6. There is a **plethora of alternative uses** for the Biogas

ISABEL Outcomes

- Local **“Biogas Social Innovation Platforms and Communities”** (one per region)
- ISABEL **online portal and tools**
- Validated **Service Portfolio**
- Plans for **Sustainable Biogas production**
- **Monitoring and evaluation** methodology
- Analysis of **local perceptions and specificities**
- **Best Practises & Replication** Guide
- **Policy recommendations**
