

# **Vision and Mission of the Lake Constance Foundation**

Safeguarding ecological resources is essential for social stability and prosperity. The Lake Constance Foundation supports all 17 of the United Nations' Sustainable Development Goals (SDGs).

As an organization dedicated to sustainability and nature conservation, we are particularly committed to the SDGs relating to the environment and climate.

# Vision

By 2050, humanity's global ecological footprint will have been reduced to such an extent that planetary boundaries for climate, biodiversity and water will not be exceeded.

Lifestyles and the economy are effectively aligned with the principle of sustainability, establishing a stable foundation for a socio-ecological society.

# Mission

The Lake Constance Foundation is a competent and constructive partner for the protection of the environment, climate and biodiversity – regionally, nationally and internationally.

With our projects, we contribute to ensuring that socially agreed environmental and climate targets are achieved earlier than planned. In addition, our projects promote social awareness of sustainable lifestyles and sustainable economic activity.

To accomplish this, we think and work creatively, innovatively and courageously. We aim for the highest possible outcomes within our project timelines. Our projects are characterised by partnership, independence and scalability. We transparently share our results and insights, actively contributing to expert discussions and political decision-making processes.
